Handoffs, Recommendations, and Evidence

Quantum Cognition for Human-AI Decision Teaming

Nathan Yang

M3S1

An Interface Suggests the Next Action

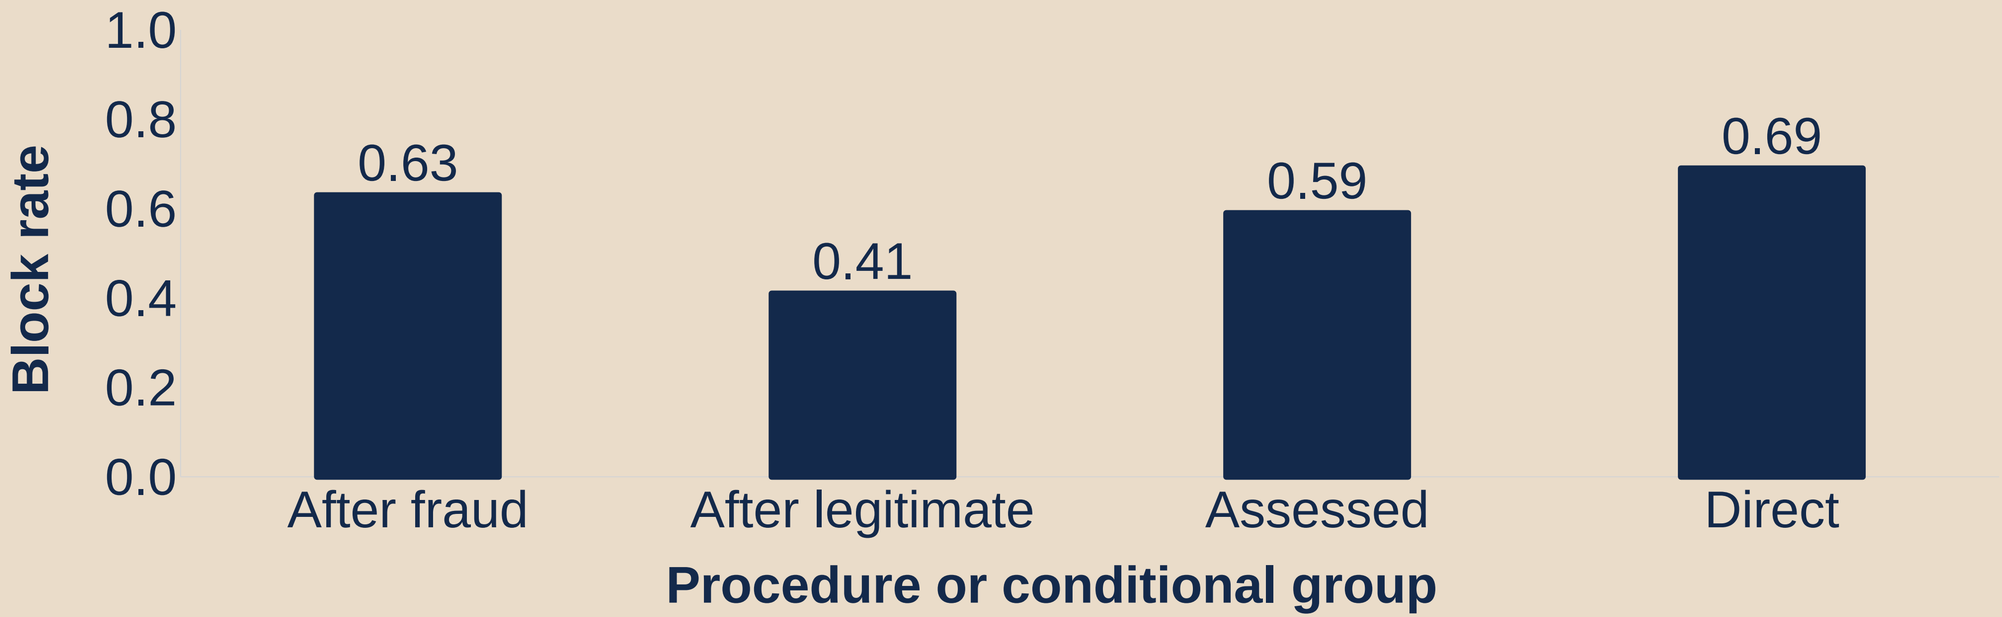

An extra identity check changes the payment process.

What does the reviewer see before choosing?

Stripe public interface demonstration, captured November 2026.

Meridian’s Illustrative Console Choice

Assessed: 0.63 × (9/11) + 0.41 × (2/11) = 0.59.

Direct: 0.69. Fictional case with imposed rates.

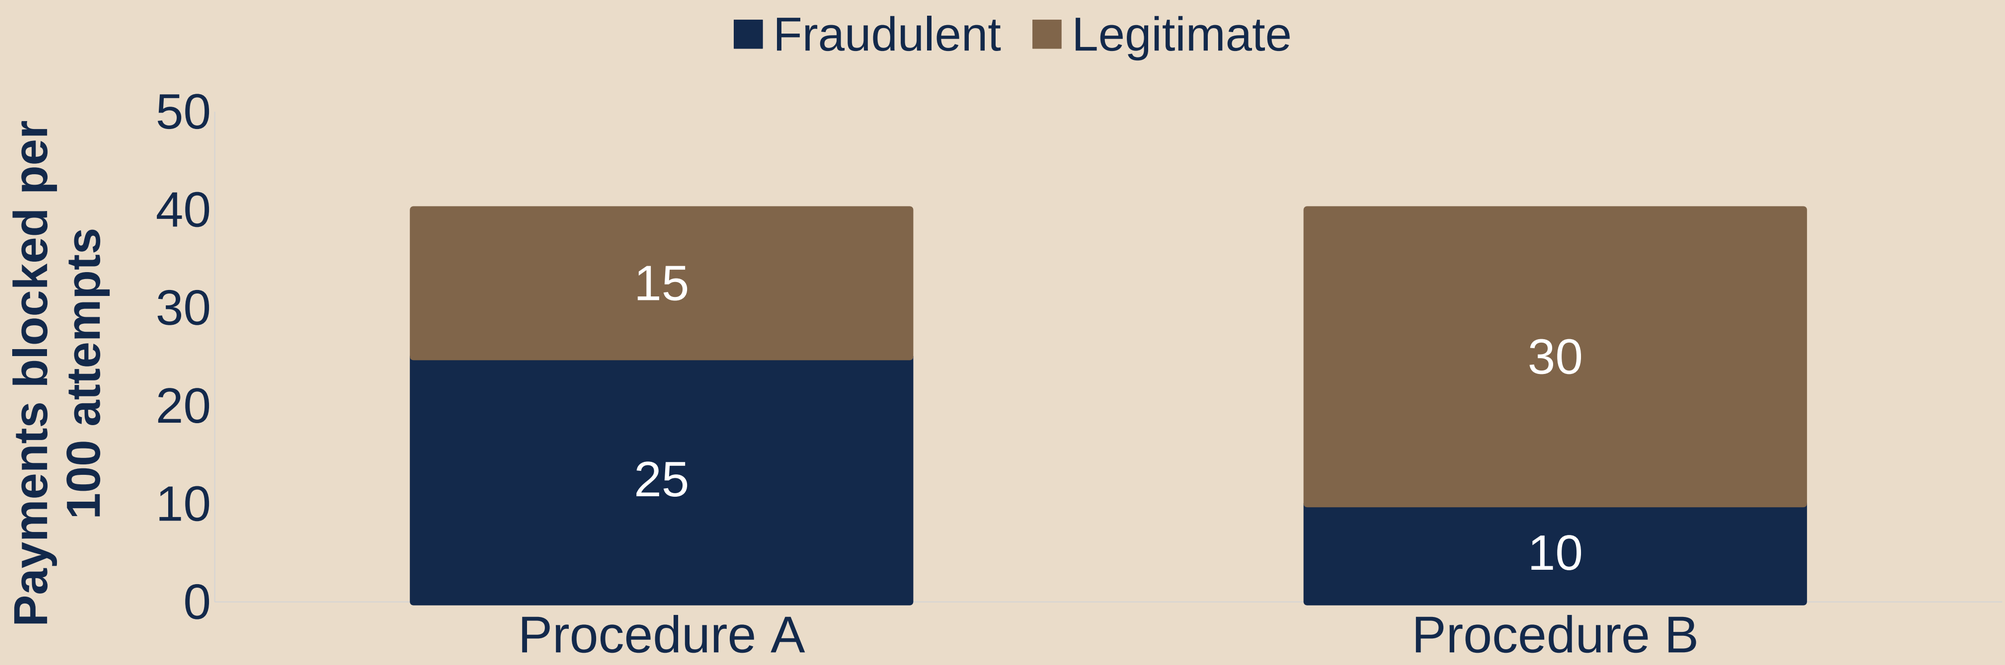

The Meaning of the Difference

Compute direct minus assessed.

State why 0.69 lies outside the fixed-rate bracket.

Name a process that could change conditional rates.

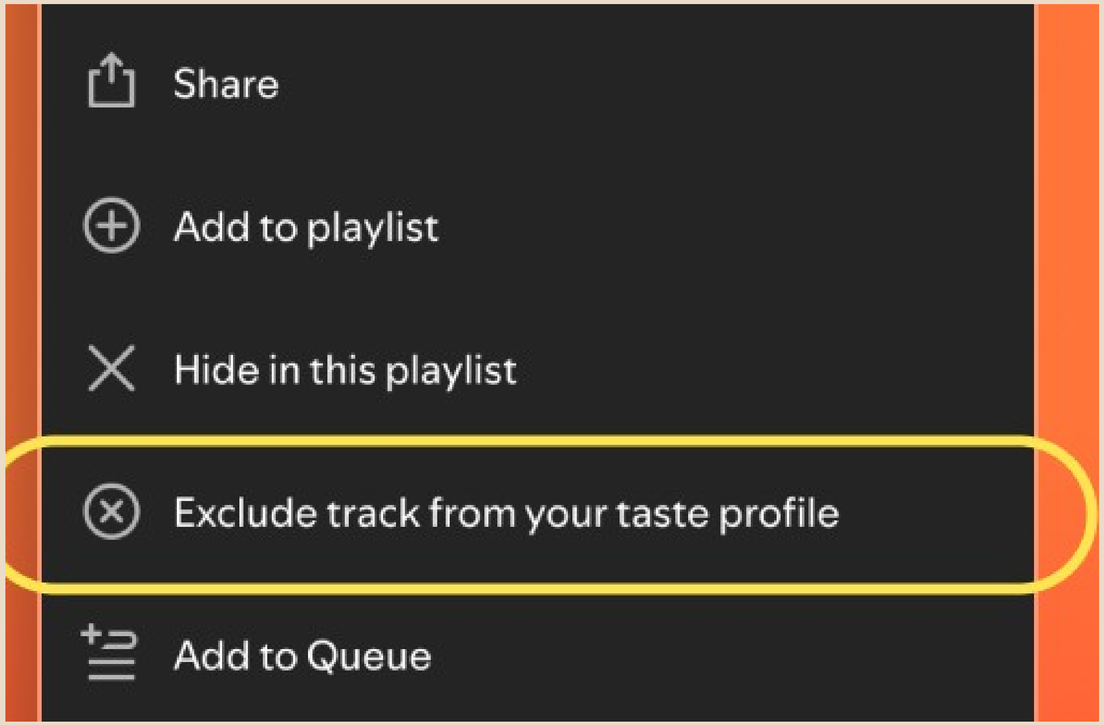

Equal Block Rates, Different Errors

Imposed outcomes: 30 fraudulent and 70 legitimate attempts in each procedure.

Which outcomes matter beyond the block rate?

Listening and the Taste Profile

A play can serve a temporary purpose.

What outcome would show that recommendations improved?

Spotify track-exclusion announcement, October 2025.

What the Panel Represents

Tier 1 checks the calculation using a simulator.

Tier 2 studies the model under documented prompts.

Tier 3 adds evidence from relevant people.

The Assessment Draft

Outline the handoff or recommendation issue for M3A1.

Name the outcome your project recommendation needs.

Bring the completed M3A2 run to the studio.
