Company Selection and Problem Framing

Quantum Cognition for Human-AI Decision Teaming

Nathan Yang

M1S2

The Decision Owner

Who must choose an action?

Which alternatives are feasible?

What evidence would change that choice?

Evidence About the Setting

Identify two public sources.

Separate documented facts from your hypotheses.

Record the source, date, and relevant claim.

Two Competing Considerations

Explain why both considerations matter here.

Write a neutral question for each.

Keep the focal decision separate.

A Research Question You Can Answer

Name the response procedure.

Name the focal outcome and comparison.

State the scope of the model-panel evidence.

Scope and Feasibility

Check access, collection time, and approved budget.

Plan all six conditions on the same persona grid.

Choose a design you can document completely.

Peer Review of the Proposal

Can a reader identify the management decision?

Do the frames follow from the public evidence?

Is the strongest alternative specific and testable?

Your Judgment and AI Use

Write your reasoning before using AI assistance.

Log the tool, prompt, and resulting changes.

Explain what you accepted, revised, or rejected.

The Proposal Draft

Save the decision, sources, and three draft questions.

Record the scope feedback.

List the remaining design choices for Module 2.
