Battery Design and Proposal Workshop

Quantum Cognition for Human-AI Decision Teaming

Nathan Yang

M2S2

The Decision and Question Battery

Read the decision statement aloud.

Check that A and B express distinct considerations.

Check that F records the decision of interest.

Six Conditions, One Persona Grid

Condition	Question sequence	Context retained
Isolated AB / BA	A, B, F / B, A, F	Fresh for each question
Constructed AB / BA	A → B → F / B → A → F	Prior questions and answers
Direct	F only	No prior assessment
Assessed	A → F	Prior question and answer

Facts, Coding, and Context

Hold the factual background fixed.

Use the same yes/no definitions.

Save the complete message history and retries.

The Collection Plan

Specify the persona grid and run schedule.

Use a randomized order of collection runs.

Record the model version and approved budget.

Decision Rules

Specify important, small, and unresolved results.

Give a managerial action for each.

Separate operational action from a mechanism claim.

Peer Review Against the Rubric

Find one claim without enough evidence.

Find one design choice that could change the result.

Propose a concrete revision.

Revisions and Their Reasons

Resolve the highest-impact issue first.

Record what changed and why.

Preserve the original prediction for comparison later.

Proposal Submission Check

Attach the proposal, battery, sources, and AI log.

Check the exact Canvas deadline.

Retain a fixed copy before collecting project data.
