Audit Synthesis and Reflection

Quantum Cognition for Human-AI Decision Teaming

Nathan Yang

M4S2

The Scope of the Evidence

What was the unit of observation?

Which procedure changed?

Which conclusion was best supported?

Findings Across Audits

Compare the procedures and measured outcomes first.

Look for shared patterns and important differences.

Retain unresolved and practically small results.

Recommendations Across Settings

Which findings led to a process change?

Which called for additional evidence?

Which supported retaining the current procedure?

The Strongest Alternative

What evidence favors the competing explanation?

Which additional comparison would be informative?

How would it affect your recommendation?

The Revised Recommendation

Name the action and responsible owner.

State the evidence that supports it.

Add a condition for review.

Reflection Notes

What did you initially expect?

What evidence changed or confirmed your reasoning?

Which habit will you carry into another decision?

Final Submission Check

Report, executed notebook, records, deck, and logs.

Check that the figures match the reported estimates.

Submit through the Canvas assignment links.
