Audit Synthesis and Reflection

Quantum Cognition for Human-AI Decision Teaming

Nathan Yang

M4S2

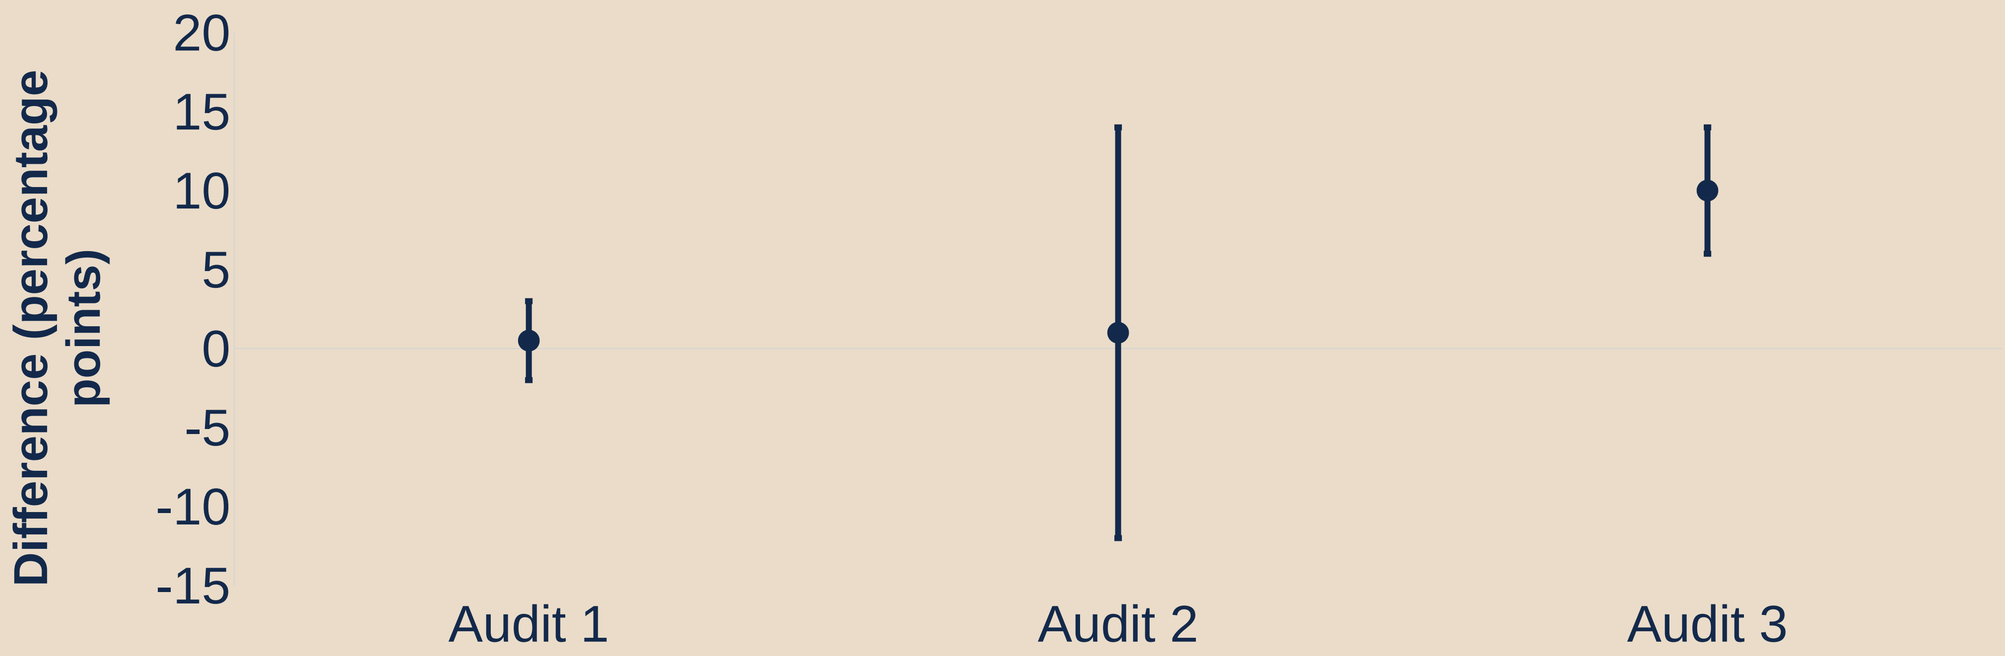

The Scope of the Evidence

What was the unit of observation?

Which procedure changed?

Which conclusion was best supported?

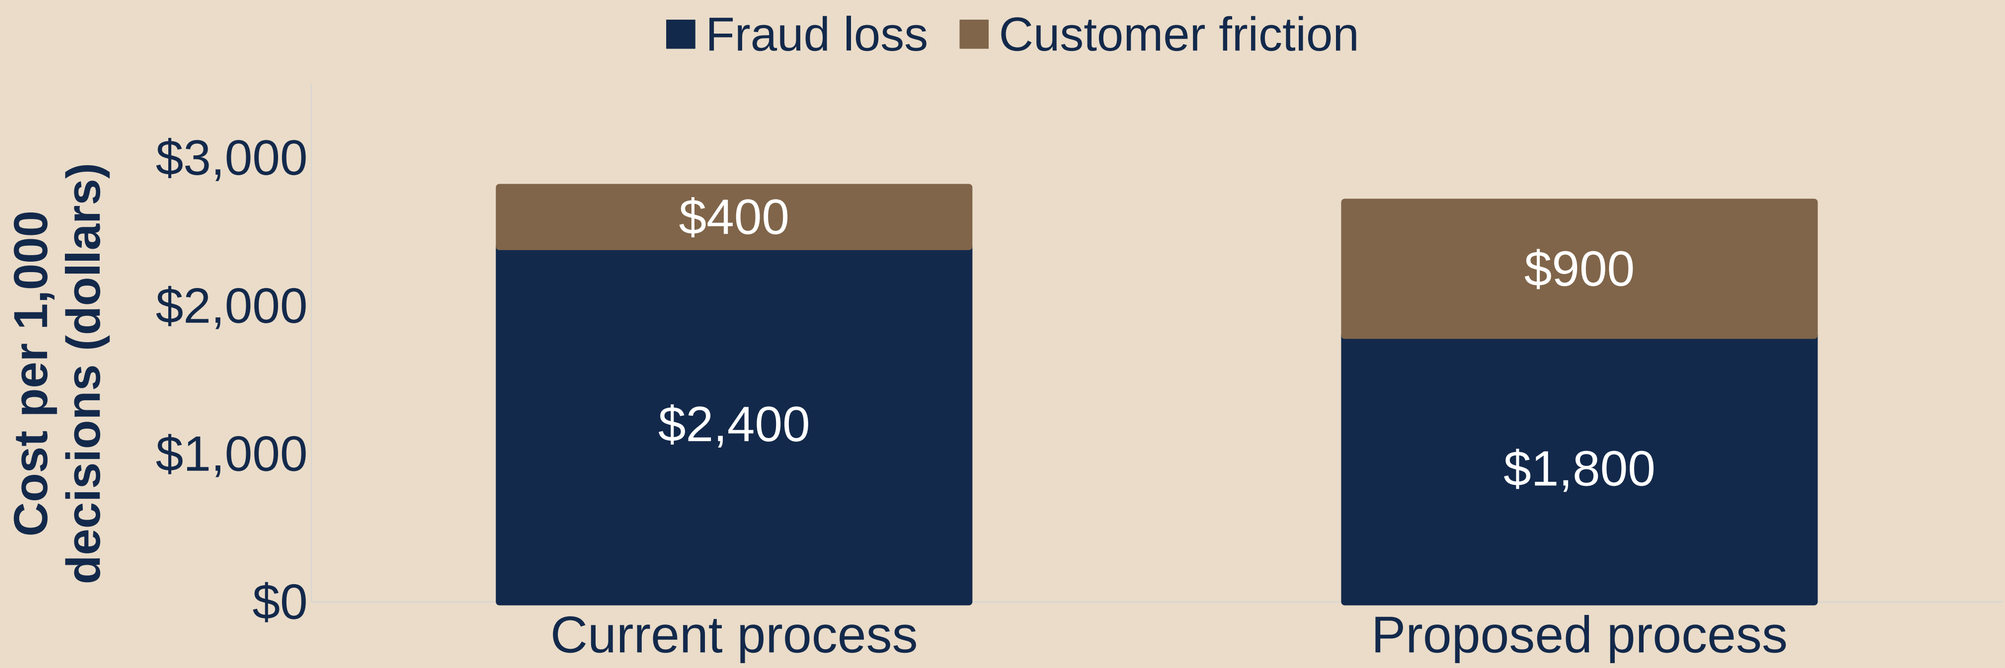

Three Audit Summaries

Imposed estimates and 95% intervals, in percentage points. Different settings.

Which comparison is justified across these settings?

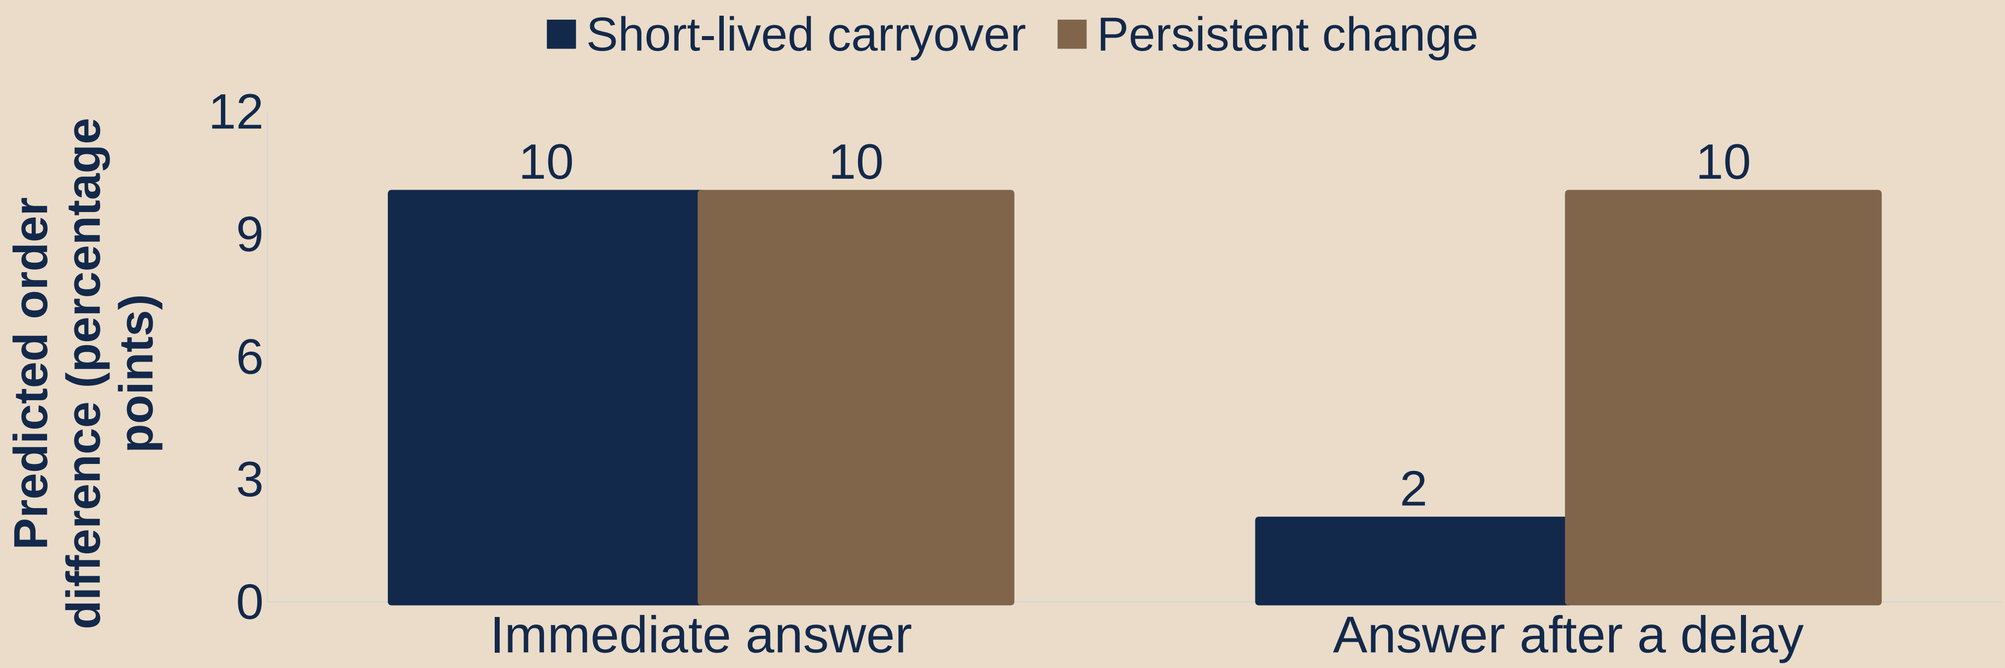

Costs of Two Review Procedures

Imposed costs: total $2,800 versus $2,700 per 1,000 decisions.

How robust is the $100 difference to your assumptions?

A New Test of the Strongest Alternative

Imposed rival predictions; no outcomes from the proposed delay test.

What must stay fixed when you add a delay?

The Revised Recommendation

Name the action and responsible owner.

State the evidence that supports it.

Add a condition for review.

Reflection Notes

What did you initially expect?

What evidence changed or confirmed your reasoning?

Which habit will you carry into another decision?

Final Submission Check

One team audit package with records and logs.

A separate oral-defense score for each student.

One independently written reflection per student.
